

ADDITIONS TO THE LIST OF THE HEMIPTEROUS FAUNA OF KANSAS.

By F. F. CREVECOEUR, Onaga.

Read before the Academy, at Topeka, December 29, 1904.

IT appears that there has not been any list of the Hemiptera of Kansas published since that of Prof. E. A. Popenoe, in volume IX of the Transactions of the Kansas Academy of Science, on pages 62 *et seq.*; so the writer has thought it incumbent upon him to make out a list of additions to that list, comprising the unlisted species collected by him, and of others mentioned in publications to which he has had access.

With the exception of the nine species of coccids at the end of this list, which are found mentioned in Bulletin No. 98 of the Kansas State Agricultural College, the species in this list were, with the exception noted in its proper place, collected by the writer within a few miles of his home, five miles northeast of Onaga. There are 147 species in Professor Popenoe's list and 244 in this, and, making allowance for about ten species that may perhaps with safety be referred to both lists, we have a total of 381 species so far reported from the state.

Acknowledgments are due the United States Department of Agriculture, Prof. C. P. Gillette, of the Colorado Agricultural College, Prof. E. D. Ball, of the Utah Agricultural College, Prof. E. P. Van Duzee, of Buffalo, N. Y., and Prof. E. A. Popenoe, for determinations and other favors shown the writer.
